

Dear Reader,

We are pleased to share the latest edition of Lango Sub Region's weekly epidemiological bulletin for week 52. This bulletin serves to inform all stakeholders at community, district and national levels on suspected disease trends, public health surveillance and interventions undertaken in detecting, preventing and responding to public health events in Lango Sub Region.

In this issue, we showcase the following updates: Sentinel Surveillance, Maternal and Perinatal deaths surveillance, Tuberculosis updates, Malaria Updates, Event Based Surveillance, Mpox Outbreak highlights in Lango region.

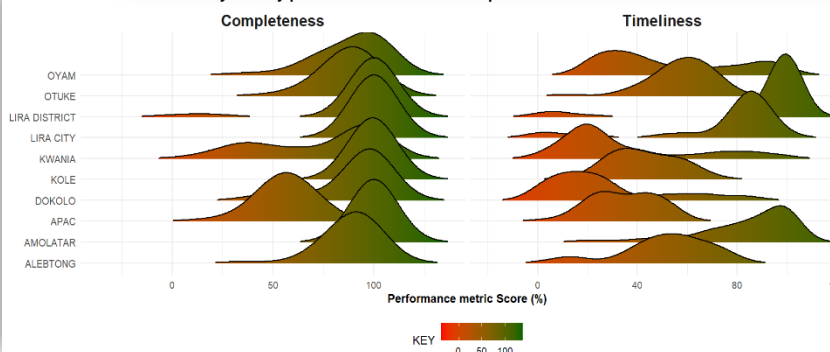

Sentinel surveillance

Reporting Rates During Epi Week 52, 2024

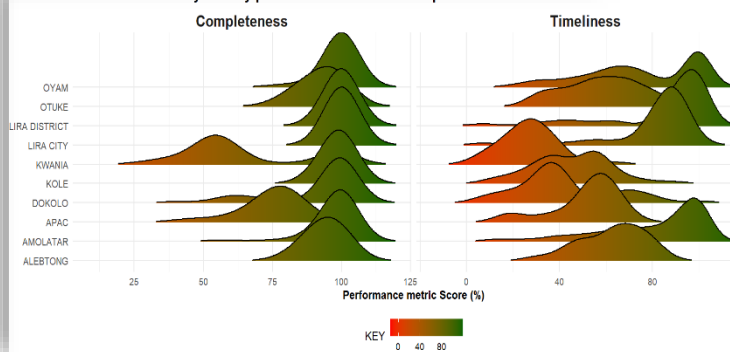

During Week 52, only three districts (Amolatar, Lira City and Lira District) attained the MOH targets for both reporting metrics .

Probability density plot of Timeliness and Completeness rates across Districts in 2024.

Probability density plot of Timeliness and Completeness rates across Districts in 2023.

The probability density plots above present the distribution of weekly reporting metrics across all Epi weeks in 2024, and 2023 for comparison purposes.

The plots illustrate how performance scores are distributed, with the peaks of the bell-shaped curves showing where most scores are concentrated for each metric.

Green zones represent scores above the MOH target of 80% (good performance), while red zones highlight scores below 60% (poor performance).

- Apac and Kwania districts have consistently recorded Timeliness and Completeness scores concentrated in the red zones (below 60%) in both years, suggesting a persistent challenge in meeting reporting standards. There is a risk of continuing this downward trend into 2025 if no support is provided.
- Amolatar, Lira City, Lira District, and occasionally Oyam have shown good performance, meeting or surpassing the 80% target more consistently.

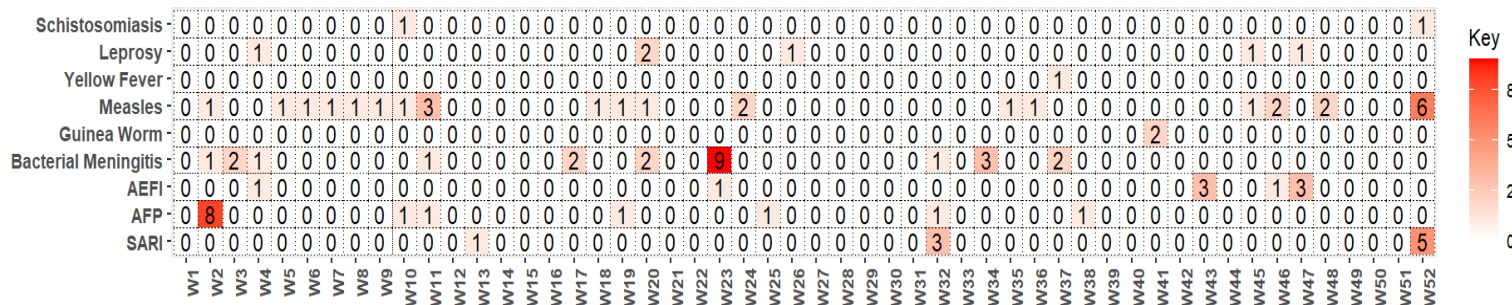

To tackle underlying issues, the LRRH-PHEOC, in support of DHTs and Implementing Partners, have proposed an IDSR user experience exploration activity purposively targeting Apac and Kwania districts to gather feedback from users, supervisors, and custodians of the IDSR reporting tools, addressing challenges in both Timeliness and Completeness. Additionally, Dokolo, Kole, and Otuke districts will be sampled for Timeliness specific improvements. The purpose is to identify bottlenecks and augment good reporting practices to improve overall performance for Lango region.

Below is a list of health facilities identified as key sites for the IDSR user experience exploration. These facilities have been purposively selected due to their consistent underperformance in recent Epi weeks as shown by the data.

Suspected cases of epidemic prone diseases reported weekly in Lango, 2024

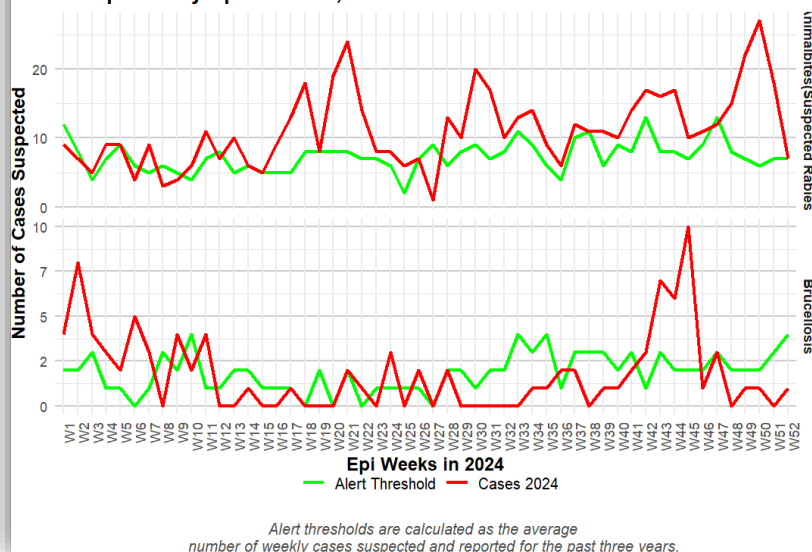

Most reported suspected epidemic prone diseases in 2024

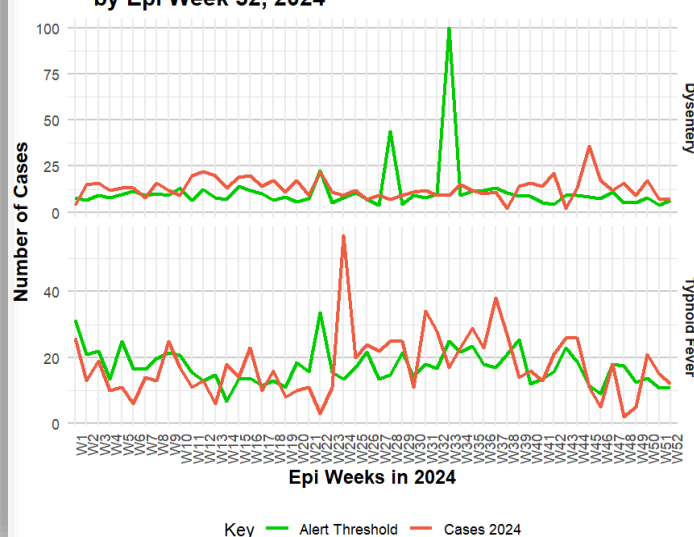

Disclaimer: Diagnoses for Typhoid, Brucellosis, and Hepatitis B cases based on antigen-antibody Rapid Diagnostic Tests

From weeks 1 to 52 in 2024, the region reported suspected cases of epidemic-prone diseases, including Guinea Worm, Schistosomiasis, and AFP — all targeted for eradication. Diarrheal diseases were also reported in significant numbers, although none exceeded epidemic thresholds. Mpox, an emerging public health concern highlighted by the global outbreaks in 2022, surpassed epidemic thresholds and is currently being well responded to as detailed in this epi-bulletin annexes. Surveillance teams are urged to heighten their indexes of suspicion for these diseases as we move into the new year.

Trends of Suspected Zoonotic Diseases Reported by Epi Week 52, 2024

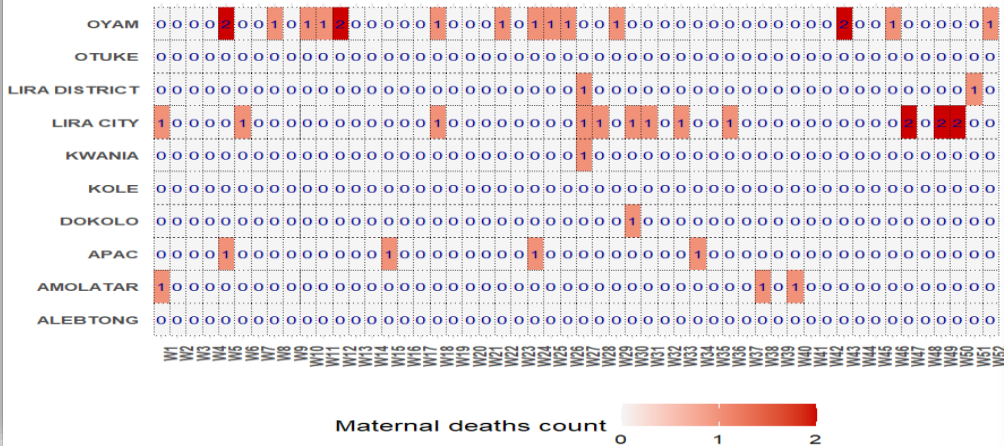

Trends of Typhoid Fever and Dysentery Cases Reported by Epi Week 52, 2024

During the year, suspected zoonotic diseases; Animal bites (suspected rabies) and brucellosis frequently surpassed alert thresholds across several epi weeks as well as Typhoid and Dysentery cases consistently exceeded expected levels, underscoring the need to strengthen the One Health approach and emphasizing to the importance of reinforcing WASH interventions to address potential risk factors. Interventions are needed from IPs

Maternal and Perinatal deaths surveillance

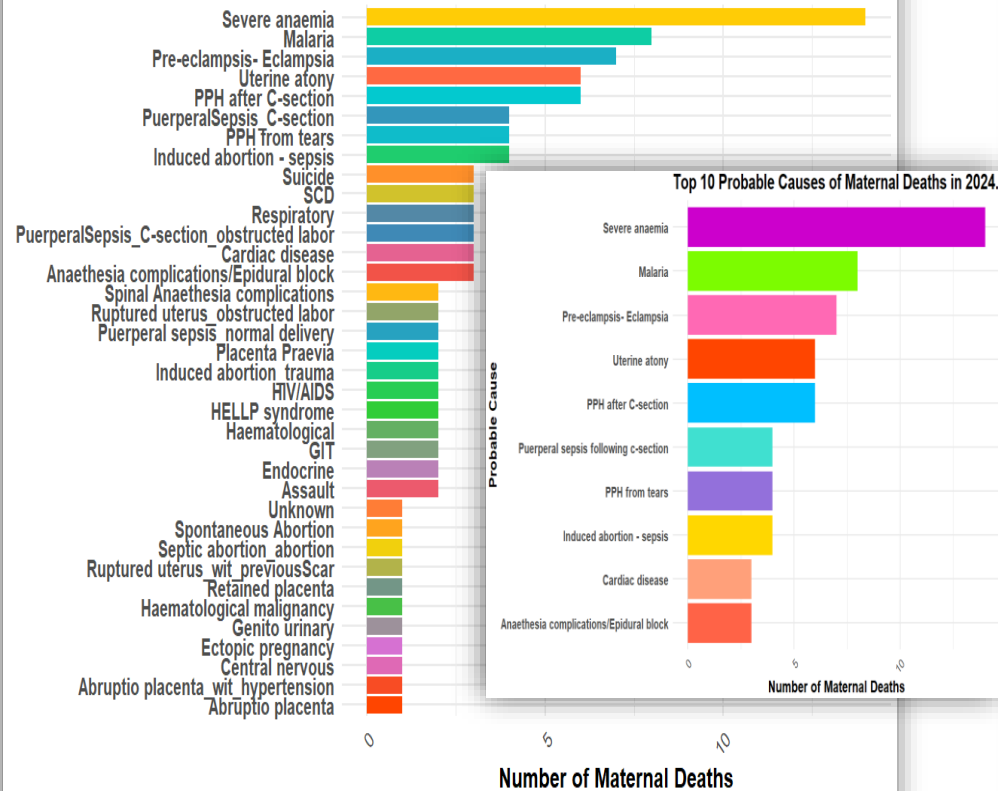

Maternal Deaths reported by Epi Weeks in 2024

Maternal and Perinatal deaths during the year 2024 for Lango region

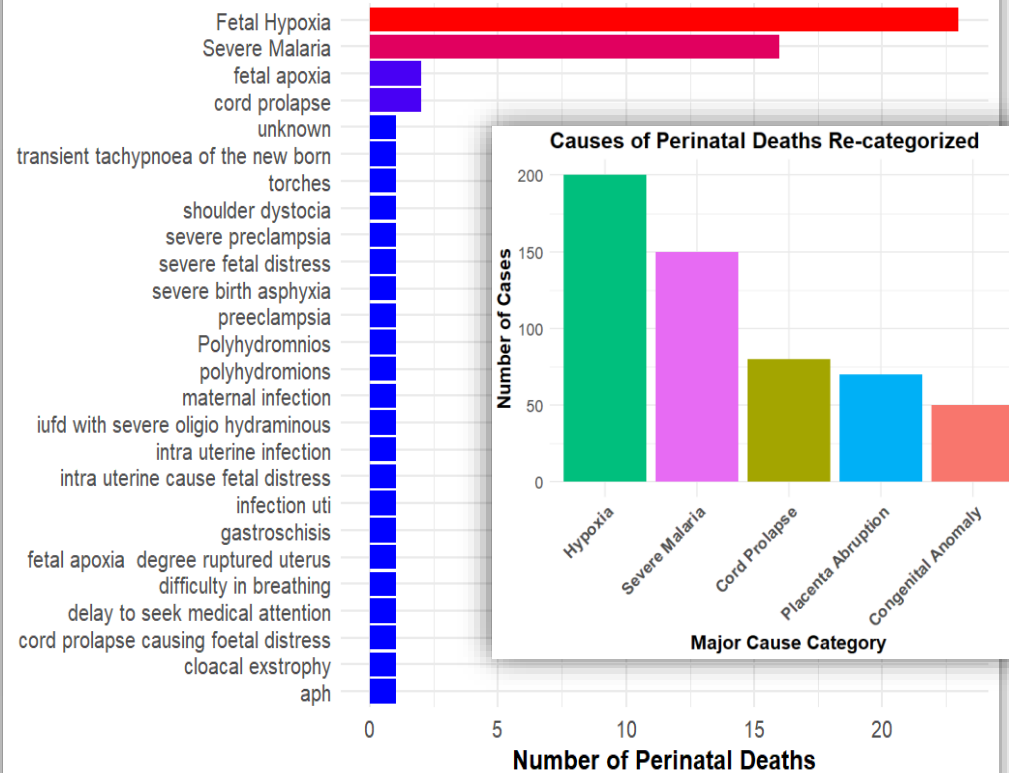

District	Maternal deaths	Macerated Still births	Early Neonatal deaths 0-7 days	Fresh Still Births
ALEBTONG	2	3	3	6
AMOLATAR	3	5	5	24
APAC	4	28	18	29
DOKOLO	1	33	16	33
KOLE	0	8	9	16
KWANIA	2	25	2	23
LIRA CITY	9	106	197	99
LIRA DISTRICT	1	14	6	10
OTUKE	1	3	2	9
OYAM	18	73	137	80
REGION	41	298	395	329
PERCENTAGE	4	28	37	31

All Probable Causes of Maternal Deaths in 2024.

Data Source: DHIS2 Event Reports_Maternal Death Review Form.

Probable Causes of Perinatal Deaths in 2024.

Data Source: DHIS2, Events Report_Perinatal Death Review Form.

The majority of the maternal and perinatal deaths causes illustrated above are preventable through timely and comprehensive antenatal care. Strengthening community awareness and encouraging women to attend ANC services promptly can significantly reduce these preventable deaths

Event Based Surveillance

Signals received through 6767 SMS platform in 2024.

District	Signals received	Proportion of signals received	Signals verified	Alert type				Signal Not Determined	Action taken : Referred	Suspected condition (s)
				Human	Animal	Natural disaster	Artificial disaster			
ALEBTONG	3	2%	2	2	0	0	0	2	1	
AMOLATAR	3	2%	1	2	0	0	0	2	1	Anthrax
APAC	15	10%	11	10	1	2	0	7	8	Rabies, Measles, Mpox
DOKOLO	82	54%	63	76	0	0	0	8	63	Measles, Mpox
KOLE	11	7%	2	11	0	0	0	9	2	Mpox,
KWANIA	2	1%	0	2	0	0	0	2	0	
LIRA CITY	14	9%	8	8	0	0	0	6	8	Polio, Mpox
LIRA DISTRICT	15	10%	10	14	0	1	0	0	10	cholera, Measles, Mpox
OTUKE	0	0%	0	0	0	0	0	0	0	
OYAM	6	4%	5	5	0	1	0	2	5	Mpox, Measles
Region	151		102	130	1	4	0	38	98	
PERCENTAGE			68	96	1	3	0	25	96	

Utilization of the 6767 SMS platform in 2024 remained suboptimal across the region, with only 151 signals received, from few districts which highlights the need to strengthen community reporting mechanisms to improve early detection and response to public health threats.

TB updates

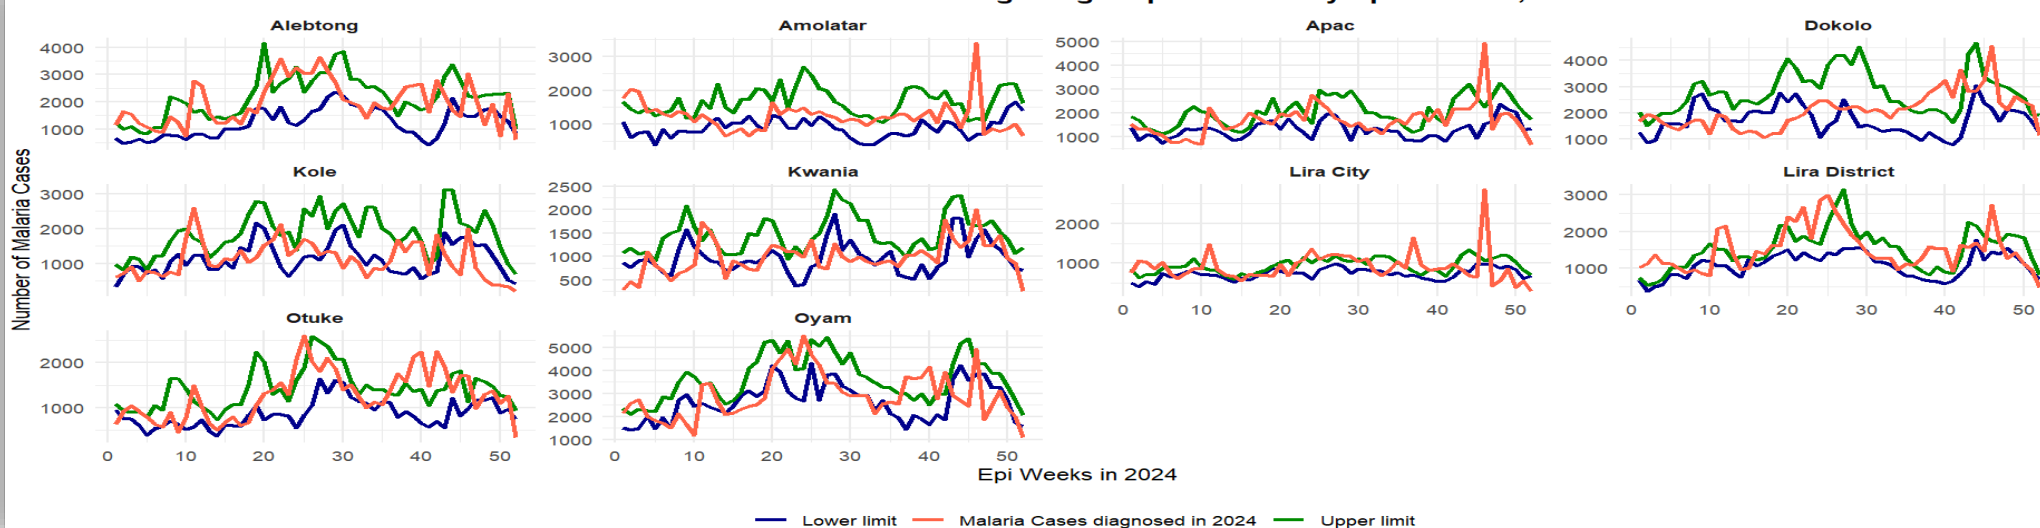

TB Indicators during Week 52, 2024.

District	Total OPD	Clients Screened for TB in OPD	% Screened	Presumptive TB cases identified	New and Relapse TB diagn & registered	TB Incidence /100,000 persons
ALEBTONG	1320	1200	90.9	19	no data	no data
AMOLATAR	1657	1920	115.9	6	no data	no data
APAC	1913	1045	54.6	1	9	4
DOKOLO	2347	2326	99.1	14	1	0
KOLE	496	482	97.2	211	2	1
LIRA CITY	515	584	113.4	5	no data	no data
LIRA DIST	2232	1550	69.4	56	4	2
KWANIA	984	971	98.7	29	3	1
OTUKE	734	638	86.9	4	no data	no data
OYAM	3344	3234	96.7	13	10	1
REGION	15542	13950	89.8	358	29	0

90 % of patients seen at OPD were screened which is at borderline target for MOH during Week 52.

Malaria status

Malaria normal channels for Lango Region per District by Epi Week 52, 2024.

No district has sustained a prolonged increase of malaria cases in the region to surpass epidemic threshold during the year 2024.

Mpox updates as of 12th January 2025, 1600hrs EAT

New Mpox cases in last 24hrs = 00

Cumulative number of cases = 16

Currently on admission = 03

Home Based Care = 05

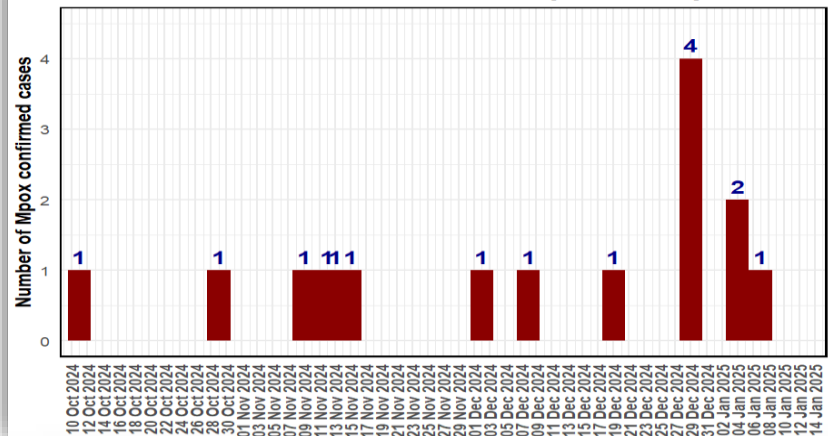

Recoveries = 08

Deaths = 00

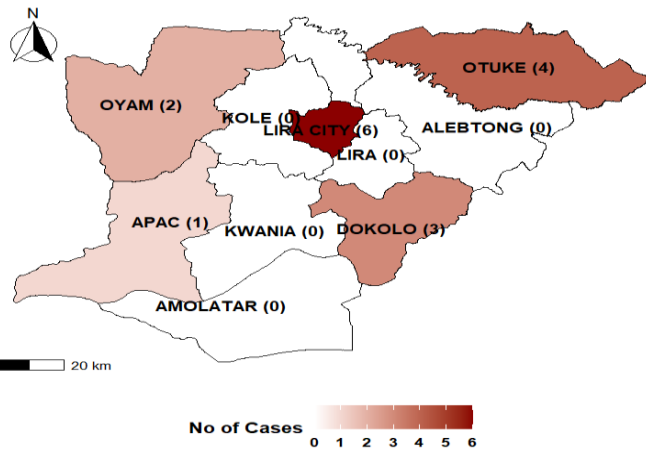

Key highlights

- Last confirmed case in the region was registered from **Dokolo District** about **six days ago**
- West Division in Lira City** contributes **31%** of the cases, making it the highest-reporting sub-county in the Lango region.
- Lira City** remains the **epicentre** of the outbreak in Lango, **highest Attack Rate (3/100,000 persons)**.
- Majority of the cases are Males 63%**, and **88% are adults aged 20-44 years**.

Case counts over time, (n = 16)

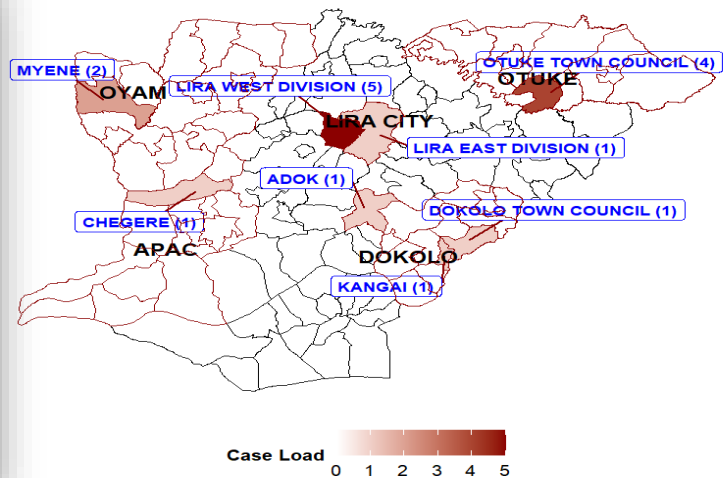

Case load in Lango districts.

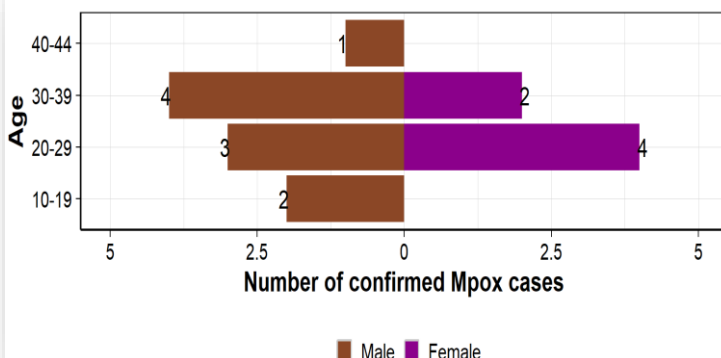

Lira City has confirmed the highest number of cases in the region (38%).

Mpox case load in affected subcounties, 12/Jan/2025.

Age-Sex distribution for confirmed cases, 12JAN2025.

Attack Rates per 100,000 persons.

District	Confirmed cases	Attack Rates	Days exclusive since last confirmed case
APAC	1	0	59
DOKOLO	3	1	4
LIRA CITY	6	3	13
OTUKE	4	2	6
OYAM	2	0	33
REGION	16	1	6

Attack Rates calculated using data from UBOS 2023 Population & Housing Census. Lira City has recorded the highest Attack Rate in Lango at 3 per 100,000 persons.
