

Lango Mpox Summary Updates, 06/APR/2025.

New Mpox cases last 48Hrs = 03 (Lira City), **Cumulative cases = 38**, **On admission = 04**, **HBC = 09**, **Recoveries = 23**, **Cum.Deaths = 02**, **CFR=5.3%**, **Cum.HCW infections = 01**.

Key points:

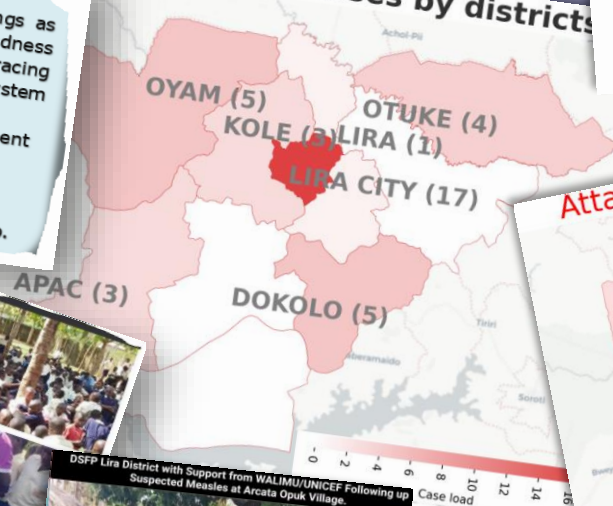

- Mpox was first confirmed **172 days** ago in Dokolo for Lango region.
- Lira District Confirms its First Mpox Case** since outbreak began in Lango.
- Second Mpox death in Lango, reported in Lira District**, was the index case confirmed case.
- Apac, Kole, Lira City & District with active transmission; <21days since last confirmed case.
- Lira City is the epicenter in Lango, highest Attack Rate (8/100K persons) (For every 100,000 people living in Lira City, about 8 have been infected with Mpox).
- Lira City's Western Division accounts for 94% of the city's cases (16 out of 17), making it the **hotspot**. However, transmission dynamics remain unclear.
- Case Fatality Rate (CFR) = **5.3%** (Approximately 6 out of every 100 people diagnosed with Mpox would die in Lango alone).
- Neither of the two Mpox deaths had HIV comorbidity**: a two-month old Female infant from **Kole District** and a 30-year old Male from **Lira District**.
- Majority cases are **Males 55.3%**, and 92% are adults aged 20-55 yrs.
- Response constrained with inadequate resources to execute field activities.

Active response pillars:

Surveillance; Routine Task Force meetings as planned, DHTs emphasize preparedness standards during routine SS, ACS, contact tracing **Laboratory**; Sample collection, hub system partially functional.

Case management: Comprehensive treatment of positive cases, HBC for stable patients or according to their assent, severe cases at Districts would be transferred to LRRH, Vaccinations for Mpox not yet started in Lango.

Distribution of Cases by districts

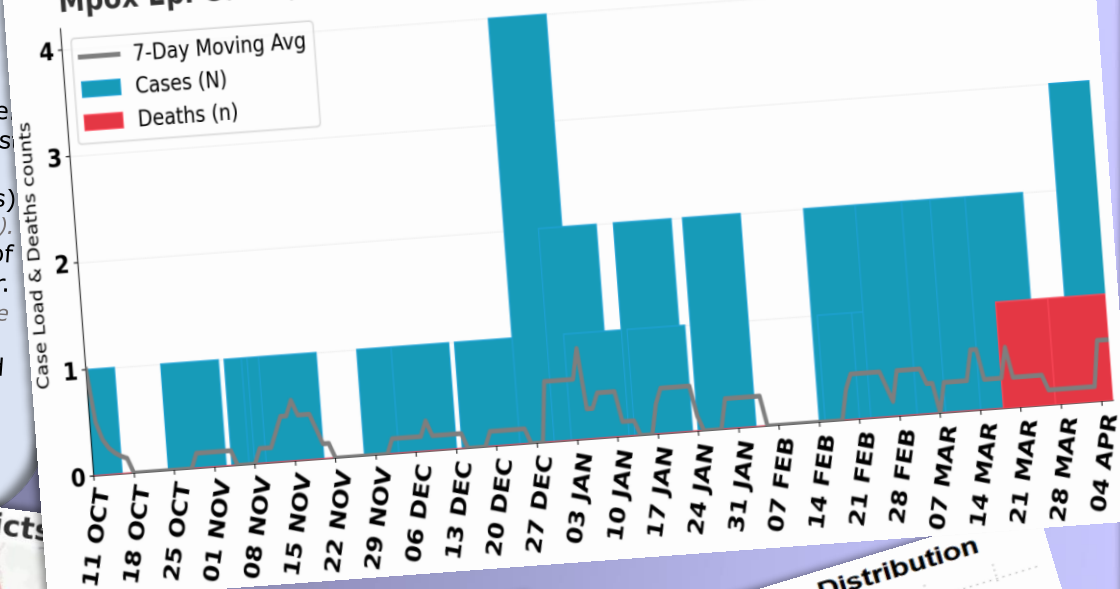

Attack Rates per 100K by District
